Water Resistant D-Sub Connectors

RoHS COMPLIANT

Fig. 1

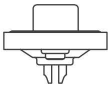

Fig. 2

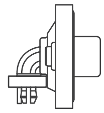

Electronic equipment that is used in harsh outdoor or indoor environments, require connectors that can withstand moisture, dust and other elements that cause connectors to fail. CONEC® has developed the new water resistant connector system. The water resistant connectors meet IEC 529-IP67 Specifications. This series of water resistant connectors can be successfully applied in applications where moisture, high humidity, water and dust are present. CONEC applies special sealing procedures to seal the connectors.
The program is UL (E202784) and CSA (LR115000-1) approved.

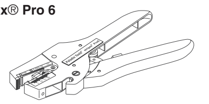
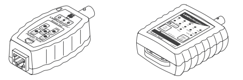
Stripax® Pro 6



LAN ProNavigator Test Set



Cable Tester: The modular cable tester is a hand held instrument designed to test telephone (RJ11) and computer data-link (RJ45) wiring.

Wire Strippers: Stripping and cutting wires in the range of 28-12AWG • Solid and fine stranded conductors with all grades of PVC insulation hardness • P.T.F.E. insulation • Stranded conductors (even several conductors in one work cycle) • Self-adjusting cable cutter • Strips both modular and discrete wires

Stripax ® Pro 6 Strippers: The new stripax performs powerful stripping of standard and industrial insulations including PVC, THHN, THHW, silicone and polyethylene. Stripping blades are composed of 68 individual spring-compression blades to adjust precisely to the insulation. Not for Teflon or Kapton hard insulations.

LAN ProNavigator™: Two-piece tester includes main unit and remote with test results at both ends. One-button, simple testing (PASS/FAIL or fault find). Detects opens, shorts, crossed wires and split pairs. Cable types, RG58, RG59, RG6, RG6 Quad, Belden 8281, RG8, RG11, CAT-5, CAT 5e or CAT-6 (UTP/STP) cable.

10/100 Base-TX MagJacks: Multi-port shielded RJ-45 connector with integrated 10/100 magnetics. Highly integrated design conserves valuable board space. Design supports AutoMDIX applications. 50 micro-inch hard gold-plated contacts. UL 94V-0. Operating Temperature 0°C ~ 70°C.

SI Series: MagJack Modular Jacks with Integrated Magnetics. The SI Series MagJack connectors offers filtering capabilities for your high-speed network and telecom applications. By integrating the magnetics into the jack body, MagJack high-speed connectors improve your signal while saving you board space.

Note: Pin without electrical connections are omitted.

30 Series: Unshielded modular plugs offer superior performance for voice, data, and high-speed networking applications.

36 Series: Shielded modular plugs provide a highly reliable connection to jacks for high-speed networking applications. Superior shielding characteristics make the 36 Series plugs ideal for environments that require protection from EMI.

Series 37: Category 5 modular plugs are designed to provide exceptional performance in high-speed communication applications. All 37 Series plugs use electropolished, 50-microinch gold-plated contacts for the most reliable, long-lasting performance.

Series 39: The high performance modular plug for cutting edge premises wiring applications.

Series 64, 65, & 70: The 64 and 70 Series jacks provide versatile and reliable right-angle solutions for your networking applications.

Series 66: Our extensive line of single-row harmonica jacks offers shielded and unshielded solutions for twisted-pair networking environments. The contacts are fully enclosed for maximum efficiency and long life.

Series 68: SOF-LOK™ posts use metal tabs to lock the jack tightly to the board with min. impact. The pogo-action contacts provide uniform pressure to the solder pads and absorb the shock of repeated mating cycles for max. durability.

Series 71: Our high-performance modular jacks are designed for fast installation into high-speed applications. The industry-standard, eight-position design is an easy drop-in replacement for Category 3 jacks.

Series 73: Enhanced shielding provides optimum protection against EMI and our unique panel tabs provide high normal force for superior shielding effectiveness. The longer springs allow repeated insertions/withdrawals from a panel, and prevent "fish hooking" on the panel if overinserted. High-Performance StackJack connectors are designed for demanding Category 5 applications.

Series 80: The rugged design of our cable-ready jacks is ideal for telco, data, mobile, and coupling applications. Available with built-in strain relief.

The economics of using fiber-optic systems is a complex subject. Comparisons of the costs of fiber-optic systems and copper-wired systems are difficult and open to debate. Proper evaluations must be based on the users' needs.

Widespread application of fiber-optic technology will depend on it providing performance equal to, or superior to, copper cable, and at a lower cost. That fiber-optics can outperform cable in some areas seems established. That it can do so more cheaply, is not the rule. As with many new technologies, the prices of fiber-optic components have been dropping, often dramatically. Better products at cheaper prices have been introduced continually, and manufacturers' volume production and maturity of experience are combining to produce significant price reductions. In contrast, prices have been rising for copper cable and associated hardware. Although the point at which fiber-optic systems become less expensive than copper cable systems depends on the application, fiber-optics are becoming more attractive every day.

Users evaluating fiber-optics should consider costs beyond those for the components themselves. Considerations include the education needed to design a fiber-optic system and the costs of training craftsmen and technicians to handle, install, and maintain fiber-optic systems. On the other hand, the small size, light weight, and flexibility may present offsetting cost advantages. Handling, storage, and installation costs may be reduced.

Kits, Tools and Accessories

Termination Kits:

For AMP FSMA, and SC Style:
Termination kits provide all the materials and tools (except epoxy) required to terminate a particular type of fiber optic connector. Tools are conveniently packaged in a handy carrying case. The kits contain polishing materials for approximately 60 connectors. The consumable items in the kit can be purchased separately.

Polishing (Lapping) Film Packets:
Polishing film sheets are used with polishing bushings for hand polishing of fiber optic connectors. Most part numbers consist of a packet of ten 8.5" x 11.0" (21.59cm x 27.94cm) sheets. Each packet will polish between 60 and 80 connectors.

Consumables Kits:
Contains all consumable supplies for at least 100 connectors. Epoxy (general purpose), polish film, epoxy applicators and polish pad.

Features:
- Pre-centered adapter mount provides quick, easy focusing, and changing of connectors • Kg-3 infrared filter to protect the user • Durable, lightweight A.B.S. plastic microscope body • Lockable, high density polyethylene, double-well carrying case with antistatic foam cut-outs

OMRON Optical Communication Devices

Omron has achieved the worlds smallest size by combining Omron's Micro Lens Array with thin film filters in a proprietary structure. This minimizes costs by reducing the number of internal parts. Omron's optical switches (1 x 2 and 2 x 2) use a low power consumption with a latching function. The numbers of components are reduced using a complex prism and are able to accommodate SC type fiber optic connectors. Applications include fault response, maintenance, (OXC) Optical Cross Connect Circuit, (OADM) Optical Add/Drop Multiplex Circuit.

Omron's 4 channel and 8 channel Mux and Demux devices are SC connector compatible for transceiver and transponder applications. Using Omron's proprietary Micro Lens Array structure makes these the worlds smallest and most cost effective Mux/Demuxs available. Use for CWDM, LX4, B-PON, E-PON, G-PON and (OADM) Optical Add/Drop Multiplex Circuit.

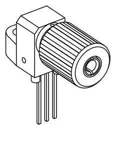
INDUSTRIAL FIBER OPTICS, INC.

Fiber Optic LEDs and Detectors

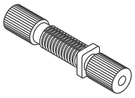


Fiber Optic family of low-cost, medium frequency, short distance fiber optic LEDs and photo detectors feature: • Connector-less interface • No optical design required • Simple fiber termination and connection.

Each LED and detector consists of a PBT housing, an internal active element such as an LED or photodetector, and a cinch nut to hold the fiber in place. The PBT housing retains the active element and the cinch nut while optimizing coupling between the active element and the jacketed 1000µm plastic fiber.

Shared Ratings: Maximum Ratings and Characteristics (T_A=25°C): Operating and Storage Temperature Range (T_{OP},T_{STG}): -40°C ~ 85°C. De-rated above 25°C: 1.33mW/°C.

Fiber Optic Connector



This multi-purpose connector is designed for jacketed 1mm core plastic fiber. It utilizes the same cinch nuts, alignment principles and no-fuss fiber terminations to quickly handle the most common requirements for joining two fibers.

END PLATES:

In general end plates are used at the end of each terminal row. If different terminals of different sizes are used on 1 terminal row, end plates are also used between these different sized terminals. The overall dimension of the end plates conform to the dimension of the terminal to match.

ISOLATION PARTITIONS:

When operating with cross-connections, partition plates have to be mounted between the cross-connection. This is necessary in order to follow the prescribed air and creepage distances.

SEPARATORS:

Some terminal types are used with separators when operating them with cross-connections for to follow the prescribed air and creepage distances. Separators can be mounted subsequently between the cross-connections.

TEST-SOCKETS:

Sockets type STB are inserted in the busbar or screwed in the modular terminal in place of the terminal screw. They serve to take up the test sockets type PS.

TEST PLUGS:

Test plug type PS serve for the final testing of finished wired terminal strips.

CROSS-CONNECTION SYSTEMS:

Q - Cross connection; QI - For cross connections the cross connection bar, connection sleeve and fixing screw are already captively mounted with the corresponding number of poles.

Micro-Pitch Terminal Blocks: The MPT 0.5 is the smallest screw terminal block available. With a micro-pitch of 2.54mm, the MPT 0.5 is ideal for high density applications.

Press Fit Terminal Blocks: The Press-Fit printed circuit board terminal block line is the perfect solution when wave soldering is not an option. The Press-Fit line is available in both fixed and pluggable styles.

PHOENIX CONTACT Terminal Blocks *(Cont.)*

Multi-Level Terminal Blocks: With their small pitch, the two and three level MKKDS and MK3DS are ideal solutions due to the increasing packing and connection density on printed circuit boards.

Insulation Displacement Terminal Blocks: The IDC printed circuit board terminal blocks mass terminate insulated conductors quickly without the need for tools.

PS Connectors for Tabs

Features:

Secure Locking, Easy Insertion: The combination of terminal and housing provides easy mating onto the male tab. Unmating is also easy, by holding the housing while pulling, the contact lock spring is disengaged by the taper inside the housing. Should you accidentally pull the wire, the locking mechanism ensures that disengagement does not take place.

Stable Contact Performance: The contact is designed with a large contact area to give stable performance, even when high current is applied.

Mis-Insertion Prevention Mechanism and Housing Lance: Inside the housing is a stopper that prevents mis-insertion, which ensures that someone will not mistakenly insert a contact in the housing.

Specifications: Current Rating: 25A AC, DC (250 + AWG 10) **Voltage Rating:** 250V AC, DC **Temperature Range:** -40°C ~ 105°C

Applicable Tab: .187” Tab 0.5mm (.020”)/0.8mm (.031”) thick; .250” Tab 0.8mm (.031”) thick.

PIDG Ring Terminals

PIDG (Pre-Insulated Diamond Grip) Terminals: Meet or exceed the requirements of MIL-T-7928, Type II, Class 1 and 2. **Product Facts: • Temperature Rating:** 105°C maximum **• AMP Wire:** Solid or Stranded **• Terminal Material:** The basic terminal is conducted of fine grade high conductivity copper per ASTM B-152 and tin-plated per MIL-T-10727. Basic material for Spring Spade Tongue Terminals is phosphor bronze per ASTM B-139 and tin-plated per MIL-T-10727. AMP's special plating process creates durable corrosion resistance to salt spray and most chemical fumes. **• Copper Sleeve:** The specially designed copper sleeve, fitted over the terminal barrel, provides circumferential insulation support to the wire and allows the wire to be bent in any direction, without fraying the wire's insulation or breaking the conductor. **• Nylon Insulation (unless otherwise noted):** Nylon sleeve assures high dielectric strength.

PIDG Insulation Restricting Terminals: **Material:** • Insulation: Nylon • Terminal Body and Metallic Sleeve: Copper per ASTM B-152 • Plating: Nickel per QQ-N-290 or Tin per MIL-T-10727. Insulation Restriction Terminals prevent the insulation of thin-wall insulation wire from entering the terminal's wire crimp area during the crimping process.

PIDG Radiation Resistant: **Temp. Rating:** 150°C maximum **Material:** • Insulation: Polyvinylidene Fluoride (PVF$_2$) • Terminal, Splice Body & Metallic Sleeve: Copper per ASTM B-152 • Plating: Tin per MIL-T-10727

PIDG Spade Terminals

PIDG (Pre-Insulated Diamond Grip) Terminals: Meet or exceed the requirements of MIL-T-7928, Type II, Class 1 and 2. **Product Facts:** • **Temperature Rating:** 105°C maximum • **AMP Wire:** Solid or Stranded • **Terminal Material:** The basic terminal is conducted of fine grade high conductivity copper per ASTM B-152 and tin-plated per MIL-T-10727. Basic material for Spring Spade Tongue Terminals is phosphor bronze per ASTM B-139 and tin-plated per MIL-T-10727. AMP's special plating process creates durable corrosion resistance to salt spray and most chemical fumes. • **Copper Sleeve:** The specially designed copper sleeve, fitted over the terminal barrel, provides circumferential insulation support to the wire and allows the wire to be bent in any direction, without fraying the wire's insulation or breaking the conductor. • **Nylon Insulation (unless otherwise noted):** Nylon sleeve assures high dielectric strength.

PIDG Knife Disconnect & Butt Splices

PIDG (Pre-Insulated Diamond Grip) Terminals: Meet or exceed the requirements of MIL-T-7928, Type II, Class 1 and 2. **Product Facts:** • **Temperature Rating:** 105°C maximum • **AMP Wire:** Solid or Stranded • **Terminal Material:** The basic terminal is conducted of fine grade high conductivity copper per ASTM B-152 and tin-plated per MIL-T-10727. Basic material for Spring Spade Tongue Terminals is phosphor bronze per ASTM B-139 and tin-plated per MIL-T-10727. AMP's special plating process creates durable corrosion resistance to salt spray and most chemical fumes. • **Copper Sleeve:** The specially designed copper sleeve, fitted over the terminal barrel, provides circumferential insulation support to the wire and allows the wire to be bent in any direction, without fraying the wire's insulation or breaking the conductor. • **Nylon Insulation (unless otherwise noted):** Nylon sleeve assures high dielectric strength.

PIDG - Spare Wire Caps: **Material:** Copper Tin Plated, Insulation: Nylon

PIDG - Butt Splice Step Down Adapter Inserts: **Material:** • Adapter Body: Copper per ASTM B-152 • Plating: Zinc/DyeChromate

Aluminum shell components. Standard olive drab, electrically conductive cadmium plated. Dependable 5 key/keyway polarization with bayonet lock coupling assures positive mating. Spring tension provided by a wave washer in the coupling nut ensures maintenance of interfacial seal between mating halves. Insert and main joint gasket molded from resilient neoprene.

Solder contacts are installed. Pins and sockets are copper alloy/gold plated.

PT solder series is UL recognized under file #E115497, Section 5

* Environmental resistant supplied with a multi-holed grommet and clamping nut for moisture-proofing individual open wires † Grommet seal with strain relief clamp

Aluminum shell components. Standard olive drab, electrically conductive cadmium plated. Dependable 5 key/keyway polarization with bayonet lock coupling assures positive mating. Spring tension provided by a wave washer in the coupling nut ensures maintenance of interfacial seal between mating halves. Insert and main joint gasket molded from resilient neoprene.

Crimp contacts are included, but not installed. (See contact hand crimping tools and contact installation/removal tools recommended below). Pins and sockets are copper alloy/gold plated.

Strain relief is included on plug.

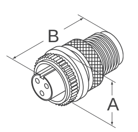
Circular 97 Series Threaded Connectors

with Solder Contacts (MIL-C-5015 Type)

Underwriters Laboratories approved recognition
File E115497. Canadian Standard Association
Certification File LR69183

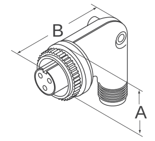
Low cost, general duty, non-environmental MIL-C-5015 type connectors. Available in either A solid or B split shell styles. Used extensively in the machine tool industry, welding industry and numerous other commercial applications. • Single key/keyway polarization • Threaded coupling • Hard dielectric inserts made of diallyl-phthalate • Aluminum alloy components with a conductive cadmium plate finish and olive chromate after-treatment • Contacts are solder type, silver plated with pre-tinned solder cups • Cable clamps are zinc alloy with olive drab/green chromate finish

Fig. 1 — Straight Plug (97 Series)



Coupling ring machined from solid aluminum bar stock for high tensile strength. Mates with all types of 97 series receptacles. Front shell includes polarization keyway. Solid shell. Threaded backshell.

Fig. 2 — Angle Plug (97 Series)



Shell is split longitudinally for convenient solder or inspection. Front shell is keyed to allow the 90 degree angle housing to be rotated and locked at any 45 degree increment.

Conxall was an innovator in the design of all plastic cylindrical connectors. The all plastic connector provides for substantial savings in cost without sacrificing performance and quality.

The all plastic connector is corrosion resistant, non-conductive and withstands substantial abuse, hostile environments, and heavy impacts that would otherwise cause metal connectors to corrode, deform or become electrically conductive and thus become unusable or unsafe.

HR25 Series

World's Smallest Round Type Multiple Contact Connectors

The HR25 is the world's smallest high-density round type connector. It was developed using Hirose Electric's long experience with miniaturization technology in answer to the continuing need for the ever greater miniaturization and high-density construction of a wide variety of electronic equipment. The voltage used should be less than 30VAC or 42VDC. Wire AWG30.

Applications: • CCD cameras, measuring instruments, wide variety of sensors, mobile radio, medical equipment. **Material:** • Insulation: PPS resin, black • Contacts: Phosphor bronze, Gold and partial gold plating • Shell: Brass and zinc alloy, Nickel plating **Ratings:** • Current capacity 1A • Insulation resistance 1000MΩ or greater • Contact resistance 30mΩ • Solder pot inside diameter 0.5mm

Amphenol®RF “FAKRA” SMB Connectors

With recent advancements in communications technology and increased consumer demand for a diverse array of on-board telematics services, RF communications systems have become indispensable components of the modern automobile. To keep RF interconnection costs low and ensure high levels of electrical and mechanical performance the German and American automotive industries have standardized a high-performing, cost-effective RF connector based on the FAKRA and USCAR standards.

Utilizing a standard metal SMB connector embedded within a plastic housing that can be designed with multiple colored codes for easy identification, FAKRA connectors are designed to perform up to 4 GHz and meet the particular mechanical and environmental requirements of the automobile industry.

FEATURES: Electrical: Impedance: 50Ω. Frequency Range: DC-4GHz. Performance Specification: SAE/USCAR-17. Insulation Resistance: 1000MΩ minimum. Center Contact Resistance: center contact <20mΩ; outer contact <10mΩ. Dielectric Withstanding Voltage (sea level): >1000VRMS.

Mechanical: Durability (matings): 100 minimum. Plastic Housing Engagement Force: ≤ 20 N. Plastic Housing Disengagement Force: ≥ 25 N. Coding: 13 mechanical and colored codings. Operating Temperature Range: -40°C ~ 115°C.

Materials: Plastic Housing: PBT with 15% Glass Fiber. Secondary Locking Clip: PBT with 15% Glass Fiber. Center Contact (female): Beryllium Copper; (male): Brass. Body: Brass. Barrel: Brass. Retainer Ring: Beryllium Copper. Ferrule: Copper. Insulator: TFE. Center Contact Plating: Gold. Body, Barrel and Ferrule Plating: Nickel.

SMK (2.92mm) Connectors

SMK Connectors provide an excellent solution for applications requiring high frequency transmission. Similar to the SMA interface, a smaller internal body diameter (2.92mm) and air dielectric provide a higher cutoff frequency and other key advantages: • Superior electrical performance to 40GHz • Female contacts have a three-slot construction, which enhances connectivity • The Field Replacement Jacks with a high quality hermetic seal feed thru for use in sealed circuit modules • The SMK plug interface employs more precise dimensions than an SMA and uses a shorter snub nose male pin such that the connector bodies align before the contacts engage

NEW! FCI AirMax VS® High Speed Connector System

The AirMax VS® connector is a revolutionary connector system that offers scaleability, flexibility, high density and headroom in performance. "VS" stands for Virtual Shield as this technology requires no interleaving shields. The elimination of these shields results in lower cost, lower weight and offers greater flexibility.

Features: • Shieldless connector system • High pin density per module • Designed to fit HM (hard metric) building practice • No pre-assigned ground pins • Excellent electrical performance • Low weight and low mating forces

Power Module, Right Angle Receptacle

The Z-PACK 2mm FB two-piece connector system uses a modular concept and a 2mm contact pitch to provide high-density, high-speed signal and power connections for Futurebus+ and Futurebus+ "like" applications.

Product Facts:

- High-density connections; four-row, 2mm x 2mm circuit grid
- Modular design for signal and power connections
- Designed to meet International Specifications IEC 1076-4-0X (48B) and EIA IS 64
- Module assemblies are end-to-end stackable
- Choice of solder leads or compliant press-fit leads
- Flat rock receptacle tooling
- Unique "cold hold" receptacle retention feature requires no tooling for lower applied cost
- Integral receptacle lead organizer

Pin and Receptacle Contacts: Duplex plated gold flash over 0.0008 (.000030) min. palladium-nickel on mating surface, 0.0038 (.000150) minimum tin-lead on solder lead, with entire contact underplated 0.0013 (.000050) nickel

Pin Contacts: Phosphor bronze

Receptacle Contacts: Copper alloy 18C

Housing: Liquid crystal polymer

MK I: MK I connectors have fixed contacts and a blade card detection switch unsealed. These connectors are intended for applications where the card usage is relatively low and the environment is benign.

MK II: EMV™ Compatible. MK II connectors with fixed contacts have been developed for applications where a landing contact mechanism is not required but performance and reliability are still key considerations.

MK III: EMV Compatible. MK III connectors are intended for applications such as pay TV, home shopping and utility meters. Mainly driven by the Set Top Box market for payment and /or deciphering.

CCM02 - Fig. 3

MK I: MK I is a connector with landing contacts. The contacts do not touch the card until it is almost fully inserted a minimal wiping action removes any non-conductive material. Designed to give a positive feel as the card is fully inserted. Features: 100,000 card insertion cycles.

MK II: EMV Compatible. MK II connectors with landing contacts are dedicated for applications where the reader usage is high and the life span of the card is a key consideration. It has been redesigned to give an even higher performance in a compact, affordable package. Features: 500,000 card insertion cycles.

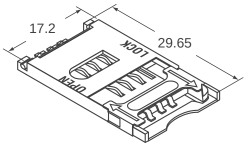

Fig. 5

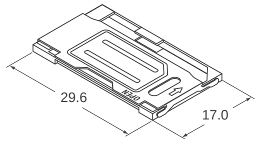

MK II: Developed to interface with SIM/SAM cards as defined by GSM11-11 and ENV1375-1. Available with either hinged covers or fixed covers and have been designed to minimize the amount of space needed for PCB mounting. The high temperature thermoplastic moldings are suited for infrared and convection soldering processes.

MK III: SIM/SAM card connector features an integrated card detection switch providing a competitive advantage to smart card reader device manufacturers by minimizing the space usage on the PCB, features a side entry to offer convenient card access without opening the device. The unique design makes it ideal for telecommunications, portable electronics, POS terminals and similar applications, and meets GSM11-11 specifications.

Fig. 7

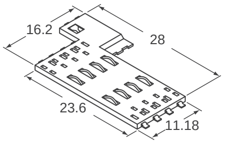

Fig. 8

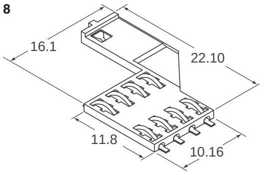
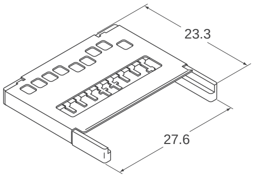


MK II: Connectors are without card guidance and used where space is at a premium and the card guidance can be built around the connector (rather than provided by the connector itself).

MK III: EMV Compatible. Designed to interface with either full or SIM/SAM smart cards and designed to minimize space usage on the PCB.

CCM05 - Fig. 9

MK II: Accepts both Secure Data (SD) and Multi Media Card (MMC) flash memory cards. Integrate them in applications such as cellular phones, PDA, smart phones, MP3 players, handheld GPS, electronic books, industrial controls or wherever portable memory is needed.



CCM05 - Fig. 10

MK II: For one of the most common card formats, ITT offers both standard and reverse reading options in small and sturdy packaging. Accepts Mini SD flash memory cards. Designed for mobile communication needs. Low profile push push connectors, 2.10 mm.

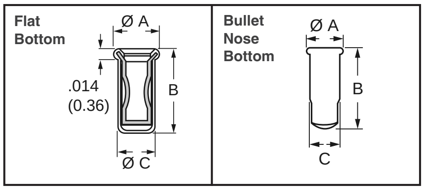
Miniature Spring Sockets



The Miniature Spring Socket System is composed of a series of individual sockets, each utilizing a permanently secured helical spring design to accept round, square or rectangular leads without socket orientation.

Features: • SMT and IRR processing compatibility • Five different hole size series .039 to .107" (0.99 to 2.72mm) available to accommodate a pin diameter range of .012 to .065" (0.30 to 1.65mm) and board thicknesses of .031 to .125" (0.79 to 3.18mm) • Low-Profile, above-board height of .022" (0.56mm) allows maximum board-to-board clearance • Small head diameter allow centerline spacing as close as .070" (1.78mm) • Inner helical spring assures maximum reliability

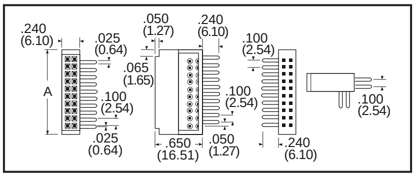
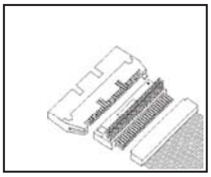
3M Intra-Connector™





When you wanted to test for a problem that might lie on the circuit board or in the cable, you had a problem. Inaccessible? Not with a 3M ESP Intra-Connector™ system. The Intra-Connector mates in-line with standard double row socket connectors. It has one set of female contacts, but two sets of male contacts at right angles. So, it provides instant line-by-line "probe-ability." The pins can also be used to make daisy chaining possible from a single connector cable end. Modified configurations are quickly available for special connections. The Intra-Connector system provides both straight-in and right angle functions. It mates with a standard .10" x .10" (2.54mm x 2.54mm) dual row connector or PC board-mounted .025" (.64mm) square pins. Two Intra-Connector systems used with the Intra-Switch™ system form a complete test assembly for probing signals under no load and full-load conditions. Contacts are non-corrosive Alloy 770; body is glass-filled polyester thermo-plastic.

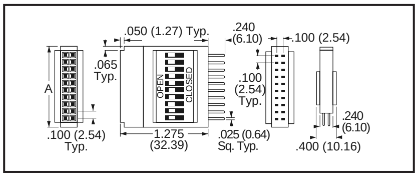
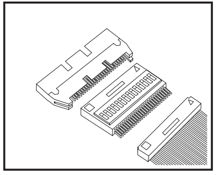
3M Intra-Switch™





There are a lot of complicated, time consuming ways to interrupt a signal line on an assembly — some may even be damaging to your PC board. But there's one easy way; Intra-Switch™ from 3M ESP. Simply by inserting the Intra-Switch™ connector between mating system connectors you have instant line-by-line switching. The low profile design and recessed switch buttons give you room to work in confined areas. Using a pencil or probe tip, any or all switches may be actuated. Applications include switching command signals to or from test equipment and programming optional preset logic functions. Switch buttons are recessed to prevent accidental switching. "Open" and "closed" positions are clearly marked, molded-in the body. Contacts are non-corrosive Alloy 770; body is glass-filled polyester thermoplastic. Intra-Switch is compatible with most sockets and mating headers for flat cable, including 3M, T&B/Ansley, Berg, Amp, Symbex and many others.

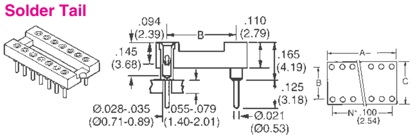
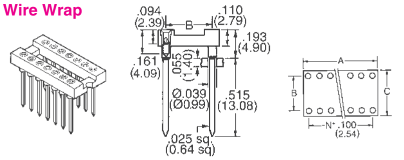
Dual-In-Line Sockets – Open Frame (Screw Machined)

Solder Tail



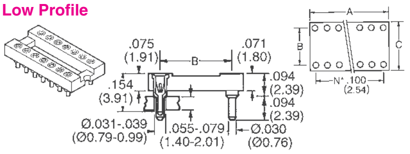
Most popular line of standard low profile IC-Sockets. Open frame design leaves space beneath IC for improved heat dissipation, easier PCB cleaning and inspection. **Insertion Characteristics:** 4-finger standard **Plating: For ED3308-ED3964:** Sleeve (Pin) – 200µ" Sn. Contact (Clip) – 30µ" Au. **For ED3108-ED3764:** Sleeve (Pin) – 200µ" Sn. Contact (Clip) – 150µ" Sn. **For ED56083-ED56646:** Sleeve (Pin) – 10µ" Au. Contact (Clip) – 30µ" Au.

Wire Wrap



Solderless wire wrap terminals are firmly locked in the insulator body to withstand torque of wrapping tool. Length of terminal for three-level wrapping. **Insertion Characteristics:** 4-finger standard **Plating: For ED4308-ED4964:** Sleeve (Pin) – 200µ" Sn. Contact (Clip) – 30µ" Au. **For ED57083-ED57406:** Sleeve (Pin) – 10µ" Au. Contact (Clip) – 30µ" Au

Low Profile



"Ultra low profile" Dual-in-line sockets are equipped with specially designed contacts allowing .095" (2.41mm) height above PCB. Special short contact requires .075" (1.91mm) insertion depth only. Solder tail diameter .030" (.76mm). **Insertion Characteristics:** 4-finger short contact **Plating:** Sleeve (Pin) – 200µ" Sn. Contact (Clip) – 30µ" Au.

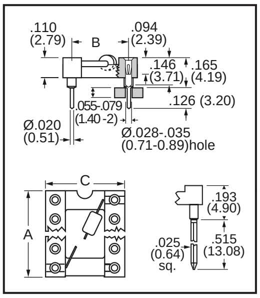
IC Sockets

With Integral Decoupling Capacitor Machine Screw Contact



Special Features/Applications:
• To eliminate noise at the source before it can reach the chip • Advantages for uses such as high speed logic and memory applications • To eliminate long leads as potential sources of noise because capacitor leads are connected directly to the ground and voltage pin of the socket • To save minimum of 12% on board space

Surface Mount Connectors — Modular Spring Loaded Contacts

• Modular contacts for use on .100" grid, available in seven heights from .137" ~ .295", supplied in single and double row contact strips. • Precision machined piston/base and gold plated components assure a 40,000 (100,000 for ED8110 and ED8130) minimum cycle life. • Pistons have a long stroke relative to the low profile of the assembly. • Low resistance, high current contacts are rated at 2 amps continuous, 3 amps peak. • High temperature thermoplastic insulators are suitable for surface mount processes. • A typical application would be as the base unit (battery/charger) interface for portable equipment such as mobile phones/radios, bar code readers, medical and test instruments.

Single In-Line Strip Sockets — Solderless Press Fit, Compliant Tail

FEATURES:

Unique compliant tail pins conforms to .040" ±.003" (1.02mm ±08mm) finished hole diameter without stressing inner layers.

APPLICATION OF COMPLIANT TAIL PINS:

Mill-Max's patented (Patent No. 4,799,904) compliant tail features precision machined pins that are hollow and slotted to conform to a .040" ±.003" (1.02mm ±08mm) diameter PTH. As the pin is inserted, the slot compresses to fit the PTH, thus avoiding damage (see illustration). The pin's tail has fine serrations that form a perfect "gas tight" connection that doesn't require soldering, and since the pin doesn't damage the hole, compliant tail sockets and connectors can be easily replaced.

Quad Flat Pack (QFP) to PGA Adapters

Fig. 1

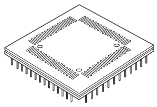

Fig. 2

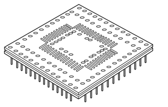

Features:

- Adapters convert surface mount type (SMD) Quad Flat Pack (QFP) packages to standard pin grid array through-hole packages on .100" (2.54mm) pin spacing. This allows SMD QFP packages to be used in standard PGA and PGA ZIF sockets, which is extremely useful for testing.
- SMD QFP packages are typically less expensive and often more readily available than their through-hole PGA counterparts.
- Users do not have to redesign through-hole boards in order to utilize the advantages of the SMD QFP packages.

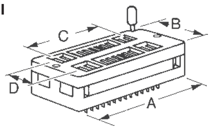
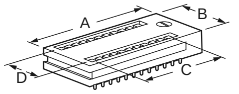
Zero Insertion Force (ZIF) I.C. Sockets

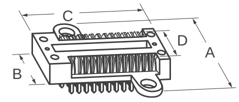
ZIP DIP II



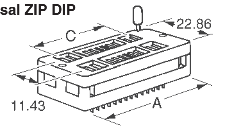
Econo ZIF



Receptacle for ZIP DIP Sockets



Universal ZIP DIP



ZIP DIP II SOCKETS:

For test and burn-in of all common dual-in-line packages on .100" lead spacing. The zero insertion pressure feature allows easy insertion and removal without lead distortion. Receptacles are ideal for high use situations such as PROM programming.

ECONO ZIF SOCKETS:

Designed for OEM/end use applications where field replacement or programming of DIPs is required. The patented ZIF feature uses screwdriver rotation of a cam (instead of a lever) for security against vibration or accidental unloading. Leads are on .100" centers.

RECEPTACLES FOR ZIP DIP:

Features: • Matching receptacle for every ZIP DIP Socket • Mounting flange standard option to hold receptacle to board • Pre-tapped holes in receptacle body mate with screw-hole in socket to hold socket firmly to receptacle (2 screws provided with each receptacle) • Available in solder-tail options. **Physical Specifications:** • Insulation Material: Glass Reinforced Polysulfone, Flammability Rating: UL94V-0 • Color: Green • Marking: Part Number Identification • Contact Material: Beryllium Copper • Plating: 30µ" (.076µm) Gold — MIL-G-45204, Type II, Grade C over 50µ" (1.3µm) Sulfamate Nickel per QQ-N-290A, Class 2 or 75µ" (1.9µm) Nickel Boron. **Electrical Specifications:** • Current Rating: 1Amp • Insulation Resistance: >1x10^{12}Ω at 500Vdc • Withstanding Voltage: 1000Vrms at Sea Level. **Environmental Specifications:** • Temperature Rating Operating: -67°F ~ 302°F (-55°C ~ 150°C)

ZIP DIP SOCKETS .100 CENTERS - DOUBLE DIP:

Features: • For DIPs with .100" lead spacing • Extra wide contact zone allows insertion of DIPs with distance between rows from .300" through .600" • Lever actuated zero insertion force mechanism • Socket easily disassembles for repairability

CME8000-BUS: The CME8000 is a BiCMOS integrated straight through receiver with build in very high sensitivity and a pre-decoding of the time signal transmitted from WWVB, DCF77, JJY40, JJY60, MSF and HBG. The receiver is prepared for multi-frequency and country reception by using an integrated logic. It is connected to an in-built micro-controller in the CME-BUS which is programmed with a pre-defined serial interface protocol. The module can then act as a tap into a inter-processor serial communications bus, and is able to communicate between two or more boards, micro controllers or other devices distributed among one or more platforms. From this module, any host can always through its interface obtain absolute proofed time information. **Features:** • Automatic reception of long wave time signals world wide • Manual or automatic selection of radio control signal possible • Forced reception mode • Real time clock • Real signal quality indicator during reception • 24-hour system • Host-controllable reception settings (including time and duration of reception) • Low power consumption (< 2mA during reception active mode) • Very high long wave reception sensitivity (0.4µV) • Build in decoding for different signals • Automatic switch between dual band signals • User settable reception mode by host software control command • Wide operating range: 2.7 to 5.0V
CME8000-DB: **General Description:** • Local time in hours/minutes/seconds plus Time Zone Indicator • Alarm • Date Alert • Time zone display in three different ways • Stop watch functions in three different ways • Low battery function • Back light
CME8000: It is the world's first mixed signal Bi-CMOS integrated straight through receiver with build-in very high sensitivity and a pre-decoding of the time signal transmitted from WWVB, DCF, JJY, MSF and HBG. The receiver is prepared for multi-countries reception by incorporating integrated logic, integrated functions such as stand by mode, integrated antenna switching, integrated crystal switching and a hold mode functions features for universal RC applications. The power down mode in the CME8000 increases the battery lifetime significantly and to make the device most suitable for all kinds of radio-controlled time pieces.
CME8000-EK: Evaluation kit includes: • TSG200 • CME8000-BUS module • 5 pieces of CME8000 samples • 6 pieces of crystal samples (two each: 40kHz, 60kHz, 77.5kHz) • 3 pieces of antenna samples (one each: 40kHz, 60kHz 77.5kHz)

ID ISC.LRM2000-A, ID ISC.LRM2000-B and ID ISC.LR2000-A

The ID ISC.LR2000 Long Range Reader and the ID ISC.LRM2000 Long Range Reader Unit are the top of the line Long Range Reader versions of the OBID i-*scan*® HF product line.

The ID ISC.LR2000 and ID ISC.LRM2000 are the most powerful reader in the OBID i-*scan*® HF product line. Both devices have identical RF performance. The ID ISC.LRM2000 differs from the ID ISC.LR2000 in terms of housing, interface options and functionality for the host connectivity of the device.

Features: • Highly sensitivity receiver increased the tag detection range so that the most transponders can be read over the entire power up, field strength area. • RF front end accommodates arbitrary cable lengths between the reader and the antenna without adversely affecting the read range of the antenna. • RF front end has its own power control to protect the read range from external noise sources. • The reader delivers a DC voltage on the antenna output to source DC powered devices connected to the antenna cable, such as the FEIG Dynamic Antenna Tuning board (ID ISC.ANT.DAT-A). • RF source of the reader meets different national radio rules and can achieve the 60dbµA/m ETSI limits.

The reader is able to directly control antenna multiplexing functions. The RF section of the reader is controlled by a dedicated DSP based, RF controller. A second microcontroller, the Application and Connectivity Controller (ACC), uses an ARM processor running a µcLinux operating system. The reader has four hardware interface ports: Ethernet, RS232, RS485, and a Compact Flash 2 compatible port to support a WLAN Card. All ports are under control of the ACC. In combination, the powerful and flexible RF transmitter and receiver and intelligent digital controller form the basis of an agile, multi protocol reader that can be updated as future protocols and features are created.

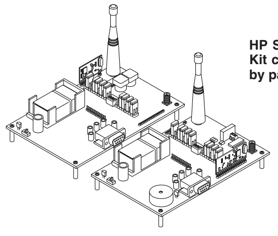
Evaluation Kits



HP Series Shown - Kit contents varies by part number

These kits provide the most complete opportunity to evaluate the Linx module series of your choice and then begin the integration of it into your own design. **Basic Evaluation Kit:** This kit is a quick way to evaluate the field performance of Linx products. The kit does not allow for the level of testing and interface possible with Master Kits but provides a cost-effective starting point. **Master Evaluation/ Development System Kit:** The kits not only allow evaluation of the module series you have chosen, but also speed the development of your own design via on-board prototyping area and breakout headers.

Antennas

Antennas are a critical and often neglected factor in determining the range and reliability of any wireless link. Antenna Factor antennas are ideal for achieving maximum performance and cost efficiency from most discrete or modular designs. All antennas are designed to meet FCC and international standards.

PW Series: Designed for permanent attachment, the PW series of 1/4-wave whip antenna is designed to offer outstanding performance in a rugged, cost-effective Part 15-compliant package. The antenna is attached by securing its base through a 1/4" hole in the product's package. The antenna is fed through the base via RG-174 (7" standard length) coax which may be soldered directly to a PCB or attached via a connector.

PML Antennas: Designed for permanent attachment, PML-Series 1/2-wave whips give outstanding performance in a rugged and cost-effective package. An internal, center-fed element eliminates the need for a groundplane. Can be attached by securing it with a nut or by threading it into a PEM-style insert. The antenna is fed through the base with RG-174 coax cable. Standard cable length is 8.5".

RH Series - Reduced Height: Significantly smaller than our larger whips, the RH series is ideally suited for products where cosmetic or functional requirements dictate a compact, aesthetically pleasing antenna.

CW Series: The CW series antennas feature an FCC Part 15-compliant Reverse Polarity SMA connector allowing for easy field replacement. These antennas deliver outstanding performance in a rugged and cosmetically attractive package.

HD Series - Reduced Height: This reduced height 1/4-wave antenna is ready for years of abuse thanks to a highly flexible internal helical which is over-molded with a heavy-duty protective jacket. The HD series is an excellent choice for outdoor application or for use in adverse environments where the antenna must resist shock, harsh weather and tampering.

RCR Antennas: Ideal for products requiring an attractive yet compact antenna in a right-angle form factor. The 1/4-wave antenna features a Part 15-compliant RP-SMA connection which mates with all Antenna Factor PCB and chassis RP-SMA connectors. Very low VSWR, Omni Directional, RA, use with plastic or metal enclosures.

RCS Series - Ultra-Compact Right Angle: The RCS series is ideally suited for products requiring an attractive yet compact antenna in a right-angle form factor.

RCL Series - Compact Right Angle: Similar to the RCS series but in a larger form factor. It is useful in products where additional height above the product's case is needed or a slightly wider operational bandwidth is desired. The 2.4GHz version has a center-fed 1/2 wave element with internal ground reference.

RCT Series: The RCT 1/2-wave 2.4GHz antenna delivers outstanding performance and maximum orientation flexibility in a compact physical package. The antennas innovative articulating base allows the antenna to tilt and swivel for optimum orientation by the product's end user. The antenna mounts quickly via an RP-SMA connector.

LP Series: LP series antennas are low-cost, reduced height, permanently attached 1/4-wave whips. They are ideal for applications requiring a rugged, cosmetically attractive, yet cost-effective antenna solution. The antennas are easily secured directly to a user's PCB via a single screw.

RA Series: The RA series offers maximum mounting and orientation flexibility in a cost-effective reduced height package. The antennas innovative base allows a wide range of horizontal and vertical motions which enhances versatility for both the designer and the customer. The antenna mounts quickly to a PCB via a single screw and meets all Part 15 Requirements.

SP Series - The "Splatch": The Splatch uses a grounded line technique to extract outstanding performance from a tiny SMT element. Unlike many compact antennas the Splatch is highly immune to proximity effects making it an ideal choice for hand-held applications for remote controls, pagers and alert devices. This unique antenna is designed for hand or reflow mounting directly to a product's circuit board.

JJB Antennas: The JJB-Series packs near the performance of a conventional monopole into an incredibly compact 7mm-diameter package. These antennas are ideal for any OEM application requiring a compact, cosmetically attractive, low-cost antenna solution. The antenna features a through-hole feedline which attaches directly to a user's PCB. Internal or external mounting is possible.

CHP Antennas: One of the world's smallest, high-performance 2.4GHz. Chip Antennas. Ideal for all 2.4GHz applications including Bluetooth, 802.11, home RF, ZigBee and other popular and emerging standards. Uses an advanced multilayer LTCC Technology and a proprietary hybrid spiral element to achieve size and performance characteristics superior to other designs. Fully compatible with hand and reflow attachment processes.

HE Series - Helical: Designed for direct PCB mounting. HE's compact size makes them ideal for internal concealment inside a product's housing. The wire diameter and coil spacing are optimized for wider than typical bandwidth.

CHP Kit: Allows for rapid evaluation of Antenna Factor's tiny ANT-2.45-CHP antenna. As one of the smallest and most efficient chip antennas in the world it is ideal for all 2.4 GHz applications including 802.11, Bluetooth, Zigbee and Home RF. Includes a reference jig which allows for immediate assessment of the antennas performance and five additional antenna samples for use in a customer's design.

RAH Kit: Ideal for products requiring ultra-compact right angle antenna

HW Kit: Low cost, outstanding VSWR antennas. These have an internal counterpoise.

Surface Mount Antennas

MHW Series: This antenna style provides a clever solution to the unique needs of difficult environments such as a vehicle. Designed to mount directly onto non-conductive interior surfaces such as wallboard, windows or a rear-view mirror, these compact antennas are easily concealed, minimizing potential theft. **HDP Series:** A compact, center-fed antenna that achieves efficient operation at either or both of two frequency bands. Its durable, unobtrusive housing attaches permanently with integral adhesive to flat, non-conductive surfaces such as wallboard. **VDP Series:** Similar to the HDP Series but the cable enters from the bottom to facilitate vertical orientation. Also, this compact, center-fed antenna that achieves efficient operation at any or all of three frequency bands. Attaches permanently with integral adhesive to flat non-conductive surfaces. **DSK Series:** Dual band, low profile antenna for indoor and outdoor use.

RF Transmitters, Receivers and Evaluation Boards

See: ECS SMT Low Profile Quartz Crystals -
CSM-7 Case for Melexis RF Transmitters

RF Transmitters:

- Fully integrated
- PLL-stabilized VCO
- Flexible frequency possible with external varactor
- Wide power supply range
- High over-all range
- High deviation possible for wideband data transmission
- FM frequency accuracy
- Very low standby current
- Adjustable output power range
- Adjustable current consumption
- Frequency deviation and center frequency
- Differential output well-suited for loop antenna
- External clock available for m C drive
- "Clock Only" mode

RF Receivers:

- Single superhet architecture for low external component count
- FSK for digital data and FM reception
- For analog signal transmission
- FM/FSK demodulation with phase-coincidence demodulator
- Low current consumption in active mode and very low standby current
- Switchable LMA gain for improved dynamic range
- RSSI allows signal strength indication and ASK detection.

RF Filter:

- Wide cutoff frequency range (0.8 ~ 22.4MHz)
- Dual-channel architecture produces superior matching and ease of use for quadrature signals
- Low power consumption (<105mA, typical 55mA from -5V supply; FC = 1MHz @ 25°C)
- Companding design provides higher resolution at lower cutoff frequencies
- Single ended or differential input operation possible (AC coupled)
- No external components for trimming necessary

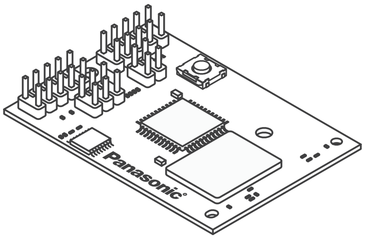
NEW! ZigBee™ Communication Module IEEE802.15.4



A low rate/low power communication device based upon the Freescale ZigBee Sensor Application Reference Design (SARD) development platform. It operates in the ISM 2.4 GHz band, and is fully compliant with the IEEE 802.15.4 standard. It's shipped ready to be downloaded with Freescale's 802.15.4 PHY/MAC layer and the Zigbee protocol layer.
The module uses Freescale's 802.15.4 transceiver (MC13193), microcontroller (GT60) and is licensed to use all released Freescale ZigBee Protocol stack layer software. Further, the PAN802154 has an on-board RS-232 interface IC and two on-board printed antennas that are etched on both sides of the board for optimum RF sensitivity. The entire RF section is shielded to prevent RF leakage and further improve RF performance. Tested to fully comply with current FCC requirements for 2.4 GHz ISM band application allowing the customer to complete and bring the end product to the market much quicker. The application profile or program can be developed with in-house SW staff or with any third-party SW development contractor including Panasonic.

Features: • Fully supports Zigbee, 802.15.4, or Simple MAC Application • 2.4 GHz ISM, Zigbee • 16 Channels, 5 MHz channel spacing, Full Spectrum Encode and Decode (IEEE Standard 802.15.4); up to 250 Kbps bit rate • RS-232 port; 2 Analog inputs selectable to 10bit A/D Converter; and up to 8 Digital I/O ports on easy to connect header connector • Background Debug Feature • 1 Switch and 1 LED for control and monitoring • Output power: 0dBm typical • RX Sensitivity: -92 dBm typical at 1.0% Packet Error Rate • Shielded RF Section for improved performance • On board printed antenna or optional connector for external antenna • Commercial and Industrial Operating Temperature Range • Power Supply Range: 2.2VDC to 3.4VDC without using RS-232 capability; 3.0 VDC to 3.4 VDC with using RS-232 capability

Applications: • Home Automation/Appliance control and monitoring • Industrial/Security/Asset Tracking • Commercial/Electronic Labeling • Medical/Patient Monitor (non-critical)

Performance Specifications: • Dimensions: 48mm x 34mm x 3mm (with onboard printed antennas) • **Operating Voltage**: 2.2 ~ 3.4 Volts DC • **Operating Temperature:** -20°C ~ 70°C • **Power Consumption:** Tx: 35ma Max., Rx: 40ma Max. • **Hybernate/Doze:** Dormant is less than 100µa • **Output RF Power:** 0 dBm typical, 3 dBm max. • **Receive Sensitivity:** -92 dBm typ. • **CPU with 4K RAM; 60K Flash:** 8 bit • **Bit Rate:** 250 Kbits/sec., 128 bytes/4ms • **Interface:** RS-232 Header, Header connector for 8 digital I/Os; and 2 analog inputs (2 ports - 10 bit A/D Converter)
